

PHOTONICS Research

Volume 4
Number 2
April 2016

Bessel–Gauss photon beams with fractional order vortex propagation in weak non-Kolmogorov turbulence	<i>Jie Gao, Yu Zhu, Donglin Wang, Yixin Zhang, Zhengda Hu, and Mingjian Cheng</i>	30
Periodic structural defects in Bragg gratings and their application in multiwavelength devices	<i>Rulei Xiao, Yuechun Shi, Renjia Guo, Ting Chen, Lijun Hao, and Xiangfei Chen</i>	35
Fabrication and application of a graphene polarizer with strong saturable absorption	<i>Weixiong Li, Lilin Yi, Ran Zheng, Zhenghua Ni, and Weisheng Hu</i>	41
Long-period grating inscription on polymer functionalized optical microfibers and its applications in optical sensing	<i>Z. Y. Xu, Y. H. Li, and L. J. Wang</i>	45
High-energy plain and composite pulses in a laser modeled by the complex Swift–Hohenberg equation	<i>S. C. V. Latas</i>	49
Optimal design of Er/Yb co-doped fiber amplifiers with an Yb-band fiber Bragg grating	<i>Qun Han, Wenchuan Yan, Yunzhi Yao, Yaofei Chen, and Tiegen Liu</i>	53
Robust and low-cost interrogation technique for integrated photonic biochemical sensors based on Mach–Zehnder interferometers	<i>V. Toccafondo and C. J. Oton</i>	57
Optical pulse repetition rate multiplication based on series-coupled double-ring resonator	<i>Xiaowei Dong, Mengzhen Xu, and Qiangqiang Zhang</i>	61
Optical forces exerted on a graphene-coated dielectric particle by a focused Gaussian beam	<i>Yang Yang, Zhe Shi, Jiafang Li, and Zhi-Yuan Li</i>	65

Liquid crystal depolarizer based on photoalignment technology	<i>Bing-Yan Wei, Peng Chen, Shi-Jun Ge, Li-Chao Zhang, Wei Hu, and Yan-Qing Lu</i>	70
Wavelet modulus maxima method for on-line wavelength location of pulsed lidar in CO ₂ differential absorption lidar detection	<i>Wei Gong, Chengzhi Xiang, Feiyue Mao, Xin Ma, and Ailin Liang</i>	74
Design of a single all-silicon ring resonator with a 150 nm free spectral range and a 100 nm tuning range around 1550 nm	<i>Ang Li, Qiangsheng Huang, and Wim Bogaerts</i>	84
Stochastic collocation for device-level variability analysis in integrated photonics	<i>Yufei Xing, Domenico Spina, Ang Li, Tom Dhaene, and Wim Bogaerts</i>	93
